The first time I played in a women's league was my sophomore year in college. I was on my way to a lacrosse career in the Navy, and I was playing an outdoor team. We had a few exhibition games and then went to a tournament in Florida. I was excited because I knew that there would be a chance to see some of the best women's players in the country. I didn't really have any idea what to expect. It was my first time being around women of all shapes and sizes. I felt as if I belonged. I felt as if I belonged in the locker room with them. I felt as if they wanted to be around me. All the things I grew up being told "you can't" felt as if they had just left my life. Playing in that tournament helped me a lot. I started to feel comfortable. I started to feel like I belonged. I started to feel as if I was the same as everyone else. I started to play like I could compete with everyone. That was a revelation to me.

That was just the first time I really played in a women's league. I have played in many more since. The next year, I got to go to my first WCL (Women's Collegiate Lacrosse League) camp. I signed up for the whole camp. It was an amazing experience to get to know the other girls in the women's league. We started hanging out, playing lacrosse and talking about everything. Run AutoCAD and open the Autocad 2020 file for editing. Go to Tools >> Symbol Editing and type down: Alt. Code: E. For example: E013F It will automatically input this symbol into the header. How to use AutoCAD for basic editing To begin, the first thing to do is create a new drawing. When you create a new drawing, you need to select a drawing template from the down menu. Now you will be able to edit your symbols. How to use AutoCAD for advanced editing To perform more advanced editing, you need to access the symbol header manually. Open the symbol header. Click on the symbol header. Now the symbol will appear in the symbol list. A big shout out to everyone who put in the work to make this year's Ashes hype even more special! Whether you've been following the series from day one or have been a part of the game going back over a decade, we're looking forward to seeing you at the 2015 Ashes this year. Our annual Ashes barbecue is on Thursday 26th May in London's Highgate, and our ace game crew will be mixing and mingling with fans who can't wait to get into the spirit. This is the best way to get involved, though, so do make sure you're there to sign-up before the deadline of Wednesday 4th April. As well as getting to enjoy a great day in London, you'll be able to cheer on the Australian team and get your hands on an exclusive pack of one-of-a-kind Ashes merchandise. We'll be announcing the winners on Wednesday 4th April and if you're selected to be part of our 'Oasis' team, you'll be treated to all the good stuff that goes along with it. Read on for all the details you need to get yourself registered, or get in touch with any questions you might have. There will be free entry to the barbecue for all registered players, and we're offering £5 off the official Ashes pack, so it's a great opportunity to not only experience what's it's like to be in the 'man-of-the-moment' zone, but to do it for less. What are the rules and regulations for the barbecue? The event will have three categories

PAPER: Enable use of paper-based layouts in AutoCAD. Use existing paper templates in layered comps and sheets, or create your own. Reuse paper to cut and assemble pieces or as an interactive guide. Now, you can import, scale, and move your paper-based layouts in Autocad, using CAD paper templates or your own custom paper drawings. You can easily use paper for part-and-process templates that you can print, cut, and assemble—or for double-sided drawings that can be annotated in multiple ways. **PDF:** Easily incorporate feedback from printed paper and PDFs into AutoCAD drawings. AutoCAD will automatically import feedback from paper and PDFs and automatically add new lines, text, and other drawing objects as changes are made. **PAPER AND PDF:** Use your paper-based layouts in your AutoCAD drawings. With this new standard for your paper-based designs, you can import your paper designs as paper-based layers in Autocad. Automatically create any paper-based elements from your printed paper or PDF layouts, so your CAD layouts match your original paper design. **After-hours support for old customers:** The extension of our after-hours support to customers who purchased a support contract before April 1, 2017, is available. You can download and install the new feature to add support in After-hours to your existing, or new, AutoCAD support contract. Your support contract is no longer required, so the after-hours support extension is free. To learn more about after-hours support, visit our Autodesk Support website. **Let customers review your drawings:** With the new Review Drawing service, you can now request that selected drawings be published for customers to review. Review drawings are published to the customer's account so customers can review the drawings on their web browsers, tablets, and mobile devices. To learn more about the Review Drawing service, visit our Autodesk Support website. **Multi-CAD:** Multi-CAD is a new integrated application that combines the capabilities of AutoCAD, Civil 3D, and AutoCAD LT. All of AutoCAD's core tools,

including drawing, engineering, presentation, and command-line, are available in multi-CAD. You can use all the existing AutoCAD product keys and have access to all the existing AutoCAD applications.
