The Blue Ridge Parkway is most often thought of as a classic American road, but for a lot of people, it's also a place of magical beauty. As a huge fan of the Parkway, I've been doing a lot of thinking lately about what makes the Parkway so special. In a way, it's a combination of three things. First, there's the obvious visual beauty of the Parkway, but it's really the sense of serenity and peace you find there that's the real draw. Second, the Parkway has something of a magic all its own, a sense of magical places, of knowing that you're in the middle of one of the most spectacular places on the planet. And lastly, it's a combination of history and culture, places like Mount Mitchell, the parkway's highest point, a place that is so steep that it's carved out cliffs that'll put even the staunchest of climbers to shame. So, what do you do if you want to be like that? What do you do to be able to pass the magic on? Well, the first thing is to be in a position to do it. The best thing is to live in one of the most beautiful places on the planet. Once you're there, you have everything you need to capture those magical moments in ways that are unique to the Parkway. There are trails, there are places to go, and you can be alone and just see the parkway, but if you want to capture something special, you have to be out in the open, you have to be out in nature. And that's why you have to leave the Parkway and get out there. The Appalachian Trail is one of the most iconic long-distance hikes in America, and no one has more of a handle on the trail than my good friend Andrew Skurka. Andy and I have done numerous hikes together, including three different wilderness hikes to Everest Base Camp. In this film, Andy talks about how the Appalachian Trail has changed him, what he has learned about nature, and how he has changed. Enjoy this short film, and enjoy Andy's knowledge of nature and the Appalachian Trail. One thing that really struck me about Andy's film was how there's something inherently American about the Appalachian Trail. Andy mentioned how, when he first started hiking, he thought the Appalachian Trail must
