Before AutoCAD, many desktop CAD programs were made as freeware, or released as shareware, with the developer offering an initial copy free and then selling additional copies at a higher price. AutoCAD differs from other CAD programs in that it was designed from the ground up as a collaborative tool, for both technical and drafting projects. Additionally, AutoCAD allows users to construct sections, multi-sectional models, and parametric models. The cost of AutoCAD varies depending on the number of licenses, features and number of users. AutoCAD Professional 2019 offers many new features including: a new Tools palette, Dynamic Input Window (a new tool that captures AutoCAD commands that are being typed into a dialog box), QuickArts and several other features. AutoCAD 2019 prices range from US\$59 per user per year for one-time license purchases, to \$2,999 for an annual subscription. AutoCAD products have been available for both desktop and mobile platforms. These products are not compatible with each other. Autodesk publishes a number of free and proprietary templates. Free templates are available on the Autodesk website, and paid templates can be purchased on the Autodesk website.
