

ASSAf's Scholarly Publishing Unit

cordially invites you to

the first webinar in the series on polemics in Artificial Intelligence (AI) titled:

"AI has gone too far OR has it only just begun"

The unregulated and competitive push for AI development, along with breakneck-speed deployment, has caused significant harm, from environmental damage to job loss and societal inequalities. These issues underscore the belief that AI has exceeded acceptable boundaries. Conversely, AI's omnipresence is viewed as beneficial, enhancing human lives and, all told, contributing to societal progress. Despite concerns about misuse, its integration into various sectors showcases its potential for positive impact, emphasising contrasting perspectives on the role and impact of AI.

This discussion will explore the different perspectives on AI's trajectory, looking at both the cautionary stance that fears its unchecked growth and potential harm and the optimistic view that celebrates its achievements and future promise.

Date: Wednesday, 22 May 2024

Time: 14:00 to 16:00

Venue: ZOOM
